ABOUT ME

Fullstack/backend developer (Python) with commercial experience since 2024: from mobile development in Flutter to server systems in Django and FastAPI, and infrastructure solutions in Docker and nginx. Built an ERP system for work-permit automation, Telegram bots for internal processes, a trading bot for the Polymarket prediction market, and a client VPN service — from architecture to production. I quickly get up to speed on new stacks and take a product from idea to release on my own, without a dedicated team.

SKILLS

Backend	Python, Django, FastAPI, Celery, Aiogram, SQLAlchemy, LDAP
Databases	PostgreSQL, Redis, OracleSQL
Frontend / Mobile	Flutter, Dart, React, JavaScript, HTMX, Tailwind CSS, Bootstrap
DevOps / Infrastructure	Docker, Git, Nginx, Caddy, VLESS, XRAY, Marzban API, Remnawave API, CDN-fronting
Data & Web3	Pandas, NumPy, Dash, Plotly, web3.py, eth-account, EIP-712, py-clob-client
Integrations & APIs	REST API, Telegram Bot API, YooKassa API, LDAP

WORK EXPERIENCE

Daimon Group

Founder · Python / DevOps | Jan 2026 – present · Remote

Trojan VPN — a censorship-circumvention VPN service for Russia

Mar 2026 – present

- Built a VPN service on the VLESS protocol using XRAY and the Marzban/Remnawave API for user and configuration management — 3 servers, up to 1000 clients
- Configured cascading traffic masking via XHTTP and CDN-fronting: Western traffic is disguised as legitimate Russian traffic, bypassing TSPU and DPI blocking
- Implemented payments via the YooKassa API and a Telegram bot on Aiogram for subscription management and access provisioning
- Built a React web dashboard for the personal account area

Stack: Remnawave API, XRAY, Docker, Git, VLESS, Marzban API, Caddy, Nginx, React, Aiogram, YooKassa API, CDN-fronting, FastAPI

Bot for finding inefficiencies on the Polymarket prediction exchange

Jan 2026 – Mar 2026

- Built a Dash/Plotly dashboard for analyzing SOL, BTC, ETH, XRP markets: comparing chart discrepancies between Polymarket and Binance, tracking volumes, and analyzing historical data
- Set up continuous Polymarket order-book data collection via WebSocket with automatic fallback to REST API on disconnect — until the WebSocket session is restored
- Built a Django app for monitoring large market players and managing proxy wallets
- Built a trading model on py-clob-client and web3.py with EIP-712 order signing; implemented an automated scalping script on 15-minute options

Stack: Python, py-clob-client (Polymarket CLOB API), web3.py, eth-account, EIP-712, Django, Dash, Plotly, Pandas, NumPy, Pydantic, httpx

PJSC Rostelecom

Python / Web Developer | Dec 2024 – Dec 2025 · Surgut

Developer of an internal ERM system and Telegram bots for automating processes and request notifications.

- Built a B2C Telegram bot (XRT) with a mini-app for tracking service requests: deadlines, missed-request alerts, per-building statistics. Used across the whole Surgut district (up to 30 requests/day) in place of the cumbersome ARGUS CRM, which field technicians couldn't access without a laptop — Python, Aiogram, LDAP, Celery
- Developed an ERP system automating work permits for the Surgut district, built key modules — Python, Django, Celery, LDAP, Redis, PostgreSQL, JS, Docker, Git, Tailwind CSS
- Built a Telegram bot notifying staff of new WFM work orders — Python, Aiogram, LDAP, SQLAlchemy, PostgreSQL, OracleSQL, Git
- Built internal tools for employees: a script analyzing staff efficiency by district, a bot for retrieving company database data during main-system outages, a geocoder converting coordinates from xlsx into map points — Python, Django, Flask, LDAP, OracleSQL

Freelance Projects

Web development outside primary employment | 2025 · Surgut

Café menu website “YaYest”

A project referred by the branch director of PJSC Rostelecom in Surgut — building a website to display a café's menu.

Stack: Python, Django, PostgreSQL, JavaScript, HTMX, Docker, Git, Bootstrap

Education platform for SurSPU

Built together with a lecturer for a competition — an education platform for students.

Stack: Python, Django, PostgreSQL, Pillow, Gunicorn, Docker, Nginx, JavaScript

Landing page for logistics company “BashAvtoSpec”

Built a landing page for a logistics company.

Stack: Python, Django, Tailwind CSS, DaisyUI, JavaScript

LLC “Sytiy Samurai”

Mobile Developer · Flutter Developer | Feb 2024 – May 2024 · Surgut

Development of a mobile app for a food-ordering system in Flutter and Dart.

- Implemented phone-number authentication and registration, API integration (auth, database, image storage)
- Designed the client app architecture, added dark theme support, cart/product/profile/order screens
- Built an Android TV app — displaying order statuses and remaining preparation time
- Built a tablet app — real-time kitchen order tracking

Stack: Flutter, Dart, REST API
